

Put an end to discolored turf!

Treated with Green Lawnger

Economical and easy to use

Green Lawnger® turf paint provides an effective, environmentally friendly, proven alternative to the problem of discoloration of dormant or stressed turf. From local fairways to the Olympic Games, Green Lawnger has demonstrated year after year its versatility and consistent quality, delivering top-notch performance under a variety of conditions and perfecting the appearance of turf for even the most demanding situations.

Green Lawnger is a permanent pigment containing no hazardous chemicals, heavy metals or other ingredients harmful to turf. Green Lawnger keeps turf looking fresh and resists wear brilliantly for 10-14 weeks, or until mowing removes the treated surfaces. Its concentrated liquid formula can be applied with a variety of different sprayers (we recommend flat fan spray nozzles and Teflon® pump seals), and you're always in control of color. By adjusting the Green Lawnger/water ratio, you can mix just the right shade for your turf.

Green Lawnger is the grounds professional's best friend—it's easy to use, versatile, economical, environmentally friendly and great-looking. Whether it's keeping golf courses looking lush and healthy or perfecting athletic playing surfaces, Green Lawnger answers the call when turf has to look perfect.

Since 1989, the trusted choice of grounds maintenance professionals

Green Lawnger has become highly recognized by grounds maintenance professionals and has made appearances at many significant sporting events, including the Super Bowl, Olympic Games, World Cup, Wimbledon and The Breeder's Cup, not to mention countless golf courses, football, baseball and soccer fields for which it is a regular tool for maintaining peak appearance.

Golf Courses

For the golf course superintendent, Green Lawnger is quality assurance in a bottle. An alternative to fall overseeding, Green Lawnger provides the same healthy, natural green color for turf and will maintain its brilliant color throughout the winter as grass lies dormant. As winter fades, so will Green Lawnger, just in time for rejuvenated turf to take over. But the benefits don't stop there. Use Green Lawnger throughout the warm season to improve the color of areas stressed by drought or pests, or give divot mix a subtle green color.

Athletic Grounds

Athletic grounds maintenance professionals also appreciate Green Lawnger's versatility and ease of application. Whether blending in worn areas of stadium turf, brightening stressed fields or keeping dormant grass vivid all season, Green Lawnger is part of many sports turf maintenance regimens and is key in preparing surfaces for major events.

For high-profile events, Green Lawnger is the effective, economical, and easy solution for less-than-perfect turf color.

A perfect fit

Green Lawnger® puts an end to discolored turf. It's not a dye; Green Lawnger is an environmentally friendly permanent green pigment. Easily applied with most sprayers, Green Lawnger adds a healthy, natural shade of green that wears brilliantly and keeps turf looking fresh until you mow it away. So, bring it on—we've got you covered.

always thinking ahead.
